Experience

Microsoft

February 2022 – Present

Software Engineer I - II (Bluetooth Platform)

Redmond, WA

- **Bluetooth LE Audio:** Designed and implemented Windows Bluetooth LE Audio features, enabling call controls, media controls, and unicast / broadcast streaming.
- **OS Integration:** Integrated Bluetooth LE Audio features into the Windows OS. Worked heavily on critical paths that allow new LE Audio features to live alongside existing Bluetooth classic implementation.
- **Fuzz Testing:** Identified and fixed memory safety issues in Windows Bluetooth stack through authoring and maintaining libfuzzer and syzkaller based fuzz tests.
- **Test Automation:** Improved Bluetooth LE Audio quality by implementing complementary device roles in automated PC-to-PC testing.
- **SIG Participation:** Maintained ecosystem quality (for both platforms and peripherals) through participation in Bluetooth SIG working groups and events as a representative of Microsoft Windows.
- **Cross-Company Technical Collaboration:** Coordinated with engineers across Microsoft and its IHV partners to design and ship Bluetooth features.
- **Internal AI Tooling:** Developed and maintained internal RAG systems to assist team in querying user telemetry and Bluetooth specifications.

University of Washington

September 2021 – December 2021

Teaching Assistant

Seattle, WA

- **TA for Intro to Networks:** Prepared and taught curriculum for foundations of Networks, leading weekly quiz sections and office hours.
- **Curriculum:** OSI Model, TCP/IP, HTTP, DNS, SDN

Nordstrom Tech

June 2021 – August 2021

Software Engineer Intern - Enterprise Single Sign On (SSO)

Seattle, WA

- **Data Visualization:** Created dashboards to monitor employee authentication events across the globe.
- **Security Automation:** Created system to automatically suspend inactive accounts for security hygiene.

Education

University of Washington

Sep. 2018 – Dec. 2021

Bachelor of Science in Computer Engineering, GPA: 3.71

Seattle, WA

Minor in Applied Mathematics

Underwater Remotely Operated Vehicles (UWROV)

Jan 2019 – December 2021

Software Lead

Seattle, WA

- **Leadership:** Led team of 11 students to design, test, and document software components of an ROV which competed in the 2021 international MATE ROV competition.
- **ROV Sim:** Created Gazebo simulation environment for validating ROV controls and competition algorithms.
- **MATE ROV 2021 Machine Learning Challenge:** Led team of 4 to create fish classifier for Coral City Camera live stream. Placed 3rd internationally.

Skills

- **Programming:** C/C++, Powershell, Python, C#, Rust
- **Technologies:** Windows, Bluetooth, Git, Linux, Docker, Kubernetes, Fuzzing (libfuzzer, syzkaller)
